

DSB GradeScript: Instructor & Grader User Guide

Platform: dsb-gradescript.streamlit.app

Access Requirement: Authorized DSB Passcode

1. Quick Start: Dual-Device Workflow

DSB GradeScript pairs a **phone camera** (as a high-speed document scanner) with a **laptop or desktop** (as the evaluation and grade reconciliation cockpit).

2. Setting Up the Laptop Cockpit

1. Navigate to dsb-gradescript.streamlit.app on your computer.
2. Enter the departmental access password (restricted).
3. Ensure the sidebar mode is set to  **Laptop (Cockpit & Evaluator)**.
4. **Configure the Grading Key:**
 - **Problem Statement:** Paste the exam prompt, starting trial balance, or scenario.
 - **Itemized Rubric:** Detail the point allocations (e.g., *Part A: 4 pts for formula and intermediate math; Part B: 4 pts for labels and accounts; Deduction: -1 pt for omitted units*).
 - **Official Solution Key (Optional):** Upload an instructor solution sheet (PDF or image). Click to pin it so it stays active across all exams.
5. **Select Scoring Strictness:**
 - **Strict:** Strictly penalizes omitted labels, intermediate work, or formatting.
 - **Standard:** Deducts for mathematical errors with minor penalties for missing units.
 - **Lenient:** Awards points primarily on the accuracy of the final answer.

3. Pairing the Phone & Scanning Exams

1. Locate the **Pairing PIN** and **QR Code** in the laptop's left sidebar.
2. Open your smartphone camera and point it at the laptop screen QR code.
3. Tap the link to open the app on your phone—it automatically launches in  **Mobile Scanner Companion** mode and fills in your session PIN.
4. **Scan the Exam Pages:**

- Choose  **Native Phone Camera**.
 - Tap **Snap / Upload Page**. When your phone's camera opens, **turn on the flash/torch** to eliminate overhead fluorescent shadows.
 - Snap Page 1, tap **+ Confirm & Add This Page**. Repeat for subsequent pages.
 - Enter the student's ID or name (optional—the AI will attempt to read the header on Page 1 if left blank).
5. Tap  **Beam to Laptop Cockpit**. The phone is now ready for the next student.

4. Evaluating & Logging on the Laptop

1. Look at the **Incoming Submissions Queue** on your laptop. If the scan does not appear instantly, click  **Refresh Incoming Queue**.
2. Click  **Evaluate Submission**.
3. In 3 to 6 seconds, the system generates a standardized evaluation:
 - **1. Student Work Summary:** Transcription of the student's handwritten calculations and logic.
 - **2. Itemized Scorecard:** Component-by-component points earned vs. points possible.
 - **3. Total Score:** Automatically calculated and pre-filled in the confirmation box.
 - **4. Instructor Feedback:** Specific feedback distinguishing math slips from terminology or label omissions.
4. **Review & Reconcile:**
 - Adjust the confirmed score or student ID if needed.
 - Check  **Flag Current for Faculty Review** if handwriting is illegible or requires secondary instructor adjudication.
 - *(Optional)* Download an individual student record via  **Download Single Student Report (.txt)**.
 - Click ☒ **Append to Gradebook & Next**.

5. End-of-Session Reconciliation & LMS Export

Once grading is complete, navigate to the laptop sidebar under **Session Exports**:

-  **1. Gradebook CSV (LMS Import):** Downloads a clean CSV (OrgDefinedId, Score, Flagged, Timestamp) formatted for immediate Brightspace gradebook upload.
-  **2. Complete Dossier (All Students):** Generates a comprehensive archive file containing every student's full handwritten transcription, scorecard breakdown, deductions, and feedback notes for your course records.

6. Faculty Best Practices

- **Shadow Reduction:** Handwritten pencil can cause glare under standard campus lighting. Using your phone's native camera with the LED flash turned on provides the highest contrast and most reliable transcription.
- **Blind Grading:** To ensure privacy and eliminate grading bias, have students write their PUID or name only on a folded top corner, or number exam papers anonymously (e.g., #1, #2) prior to scanning.
- **Multiple Graders:** Multiple TAs can grade concurrently. Each laptop cockpit generates a unique 4-digit PIN, ensuring scans route only to the paired computer.

DSB GradeScript: Instructor & Grader User Guide

| Document Attribute | Details |

---|---

| **Document ID** | DSB-DOC-GS-2026-V1 |

| **Current Version** | **v1.2.0** |

| **Release Date** | September 2026 |

| **Software Target** | DSB GradeScript (Production Build `v1.2.x`) |

| **System URL** | <https://dsb-gradescript.streamlit.app/> |

| **Target Audience** | Daniels School of Business Faculty, Instructors, and TAs |

| **Maintainer** | Instructional Technology & Innovation / Daniels School of Business |

| **Status** | Active / Production |

Revision & Version History

| Version | Release Date | Summary of Operational Changes | Author / Approver |

|---|---|---|---|

| ****v1.0.0**** | 2026-09-05 | Initial release: Single-page desktop evaluation with custom rubric entry. | J. Eagan |

| ****v1.1.0**** | 2026-09-12 | Added multi-page sequential PDF/image support and Brightspace CSV gradebook export. | J. Eagan |

| ****v1.2.0**** | 2026-09-24 | ****Current Release:**** Added QR-code mobile scanner pairing, native hardware torch/flash support, live queue refresh, cross-discipline strictness controls, and session dossier generation. | J. Eagan |
